

Resource Recovery Management

Materials Recovery Facility

Specialised machines separate steel and aluminium cans, hard plastic bottles and containers, paper and cardboard and glass bottles and jars from contamination.

Facility for Yellow Lid Bin materials.

Glass Processing Facility

Separated glass from the MRF is further screened and crushed into a sand substitute for construction.

Screened recyclables are baled and dispatched for recycling into new items.

Concrete Recycling Facility

Material is screened separating organics from residual waste.

Metal/White Goods Drop Off

Aerobic digesters break down organic waste.

Greenwaste Drop Off

Organic material decomposes and fully matures into compost.

Screened compost is now ready for delivery to local farms.

Facility for Red Lid Bin materials.

Separated inorganic residual sent to landfill.

Buy Back Shop

A store selling reusable and recyclable items diverted from landfill including:

- Household items
- Building materials
- Clothing/accessories

Advanced Resource Recovery Facility

Transfer Station

A drive in drop off area for household recycling and waste materials including:

- Household batteries, chemicals, oil and paint
- Green Waste
- White goods and scrap metal

Capped Landfill Site

No longer receiving waste. Closed, capped, revegetated and monitored for ongoing environmental protection.
