A little litter is a big problem

Did you know that 100,000 marine mammals die every year around the world due to plastic pollution?

Here are some ways you can protect our marine life:

1. Lead by example
Always put your rubbish in the bin to set a positive example for everyone around you.

2. Call out your friends
Encourage them to put their rubbish in a bin too, making a positive impact collectively.

3. Clean up Cairns
Pick up litter when you see it and join a community clean up in your area.

4. Create change
Talk to your school about replacing problem items so they don't become litter.
